

VISIT THE STEM CENTER

Group Visits and Field Trips

Our STEM on Site program provides an opportunity for school groups to engage in a hands-on STEM activity. Topics may include robotics, artificial intelligence and engineering. This program is also available to adult groups who may be looking for a fun way to experience what K-12 students learn in the STEM Center.

Competitions

Opportunities are available annually for middle and high school students to showcase their STEM skills. This includes the popular middle school Fluid Power Action Challenge and high school Opportunity Conferences.

Evening, Weekend and Summer Programs

Whether it's an evening maker club or a summer day program, there are always opportunities for K-12 students to explore something new in STEM. Visit msoe.edu/stem or join our mailing list to receive program alerts when new sessions are added.

MSOE High School Robotics

Join our award-winning FIRST FRC team, Milwaukee Cyber Cheese! This team is open to any 9th-12th grade student who is interested in exploring their interests in building, coding, community engagement and business through competitive robotics.
